# Invasive Species

**Alien Species:** An alien species is a plant or animal that is not native to a specific location (an Introduced species)

**Invasive Species:** An alien species that has a tendency to spread, which is believed to cause damage to the environment, human economy and/or human health.

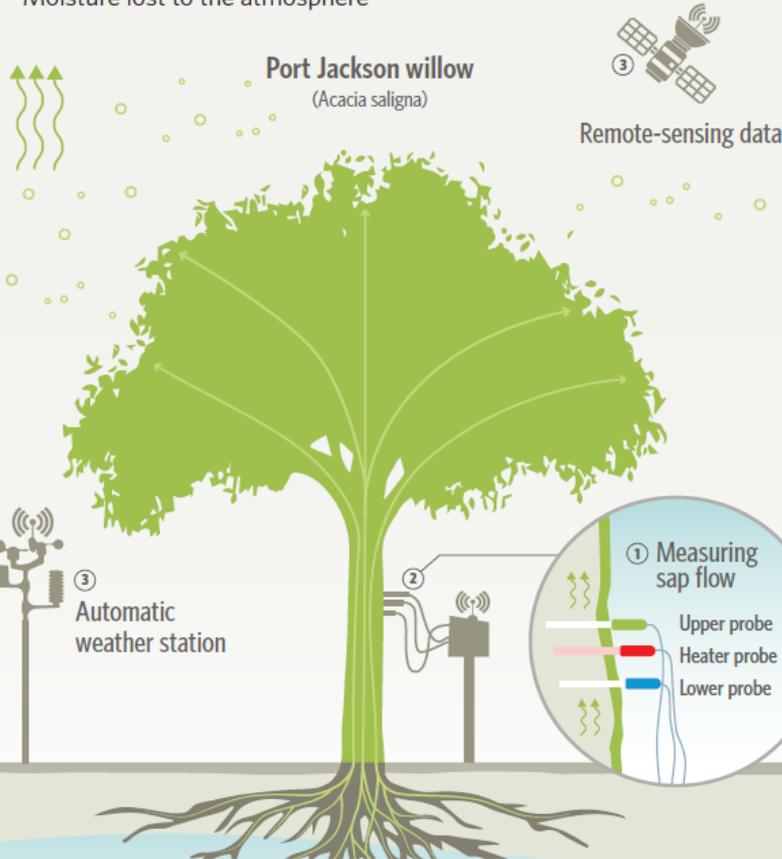

# Infographic

## Invasive tree sap flow study

Data collected from 1 July 2018 to 30 June 2019

### EVAPOTRANSPIRATION

Moisture lost to the atmosphere

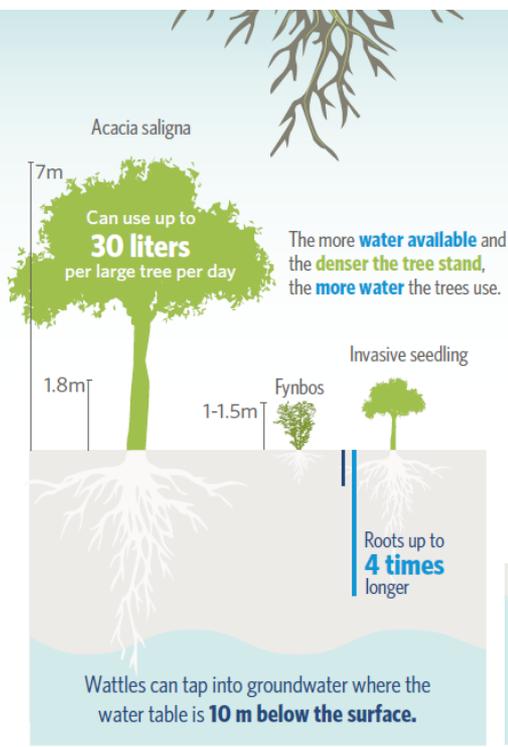

## How much groundwater are we losing to invasive trees?

### Unpacking the science

A recent study<sup>1</sup> measured how much water is lost to invasive trees. The study was conducted in the Atlantis Aquifer region, approximately 50km north of Cape Town.

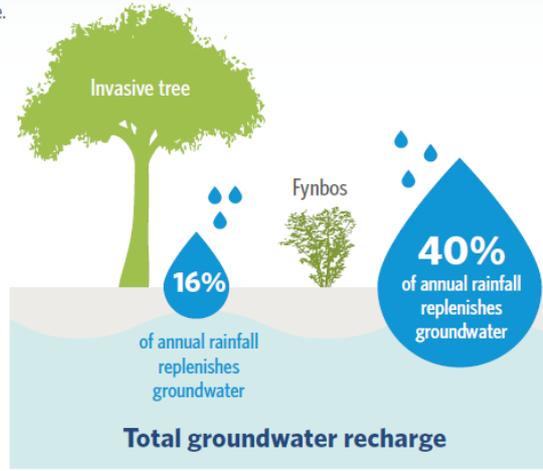

### How the data was collected

- 1 The scientists conducted sap flow measurements to quantify plant water use.
- 2 They inserted sap flow sensors into the xylem vessels of tree stems. The probes tracked the movement of water through the trees by using heat as a tracer.
- 3 Remote-sensing and an automatic weather station provided more data.

Atlantis Aquifer

## What the science tells us Thirsty invaders vs water wise fynbos

Atlantis Aquifer

**2** RECLAIM UP TO **million liters** per hectare per year

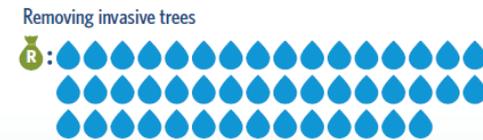

### Findings

An invasive Port Jackson willow tree uses up to **8 000m<sup>3</sup> of water per hectare, per year** in high density stands with access to groundwater.

Removing invasive plants and restoring indigenous fynbos could result in the reclaiming of between **830 000 litres per hectare** and **2 million litres per hectare, per year**.

## Cost vs groundwater gains ratio for the Greater Cape Town region<sup>2</sup>

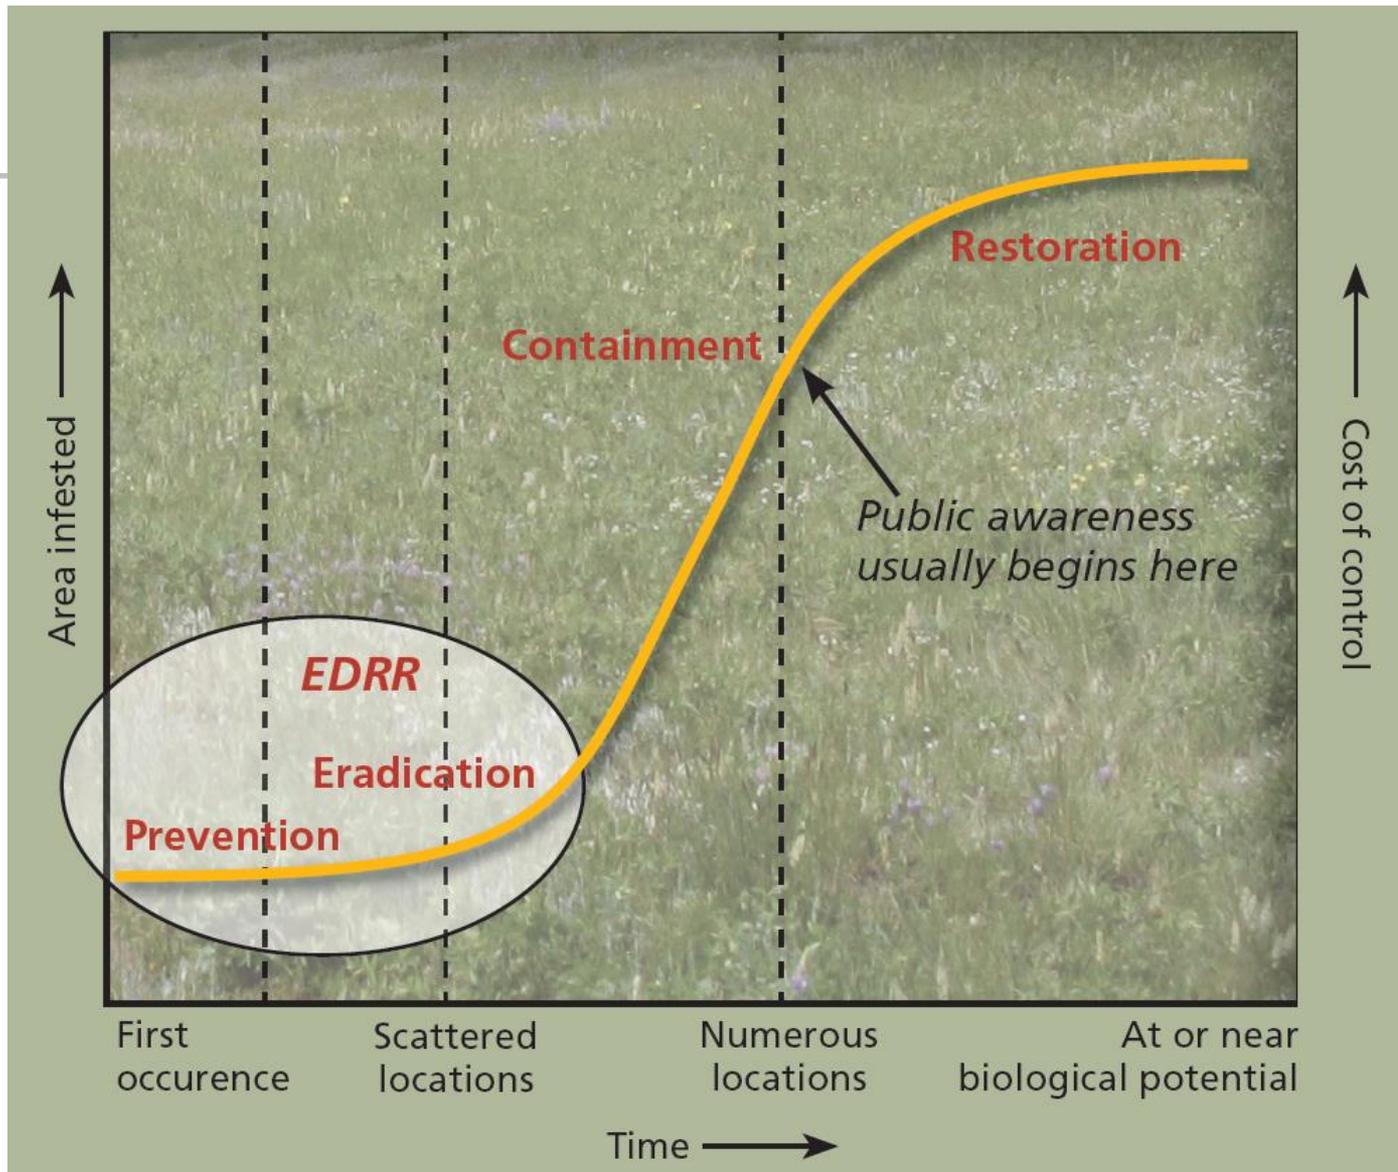

1. Bugan, R. et al. (2019). Assessing water losses as a result of invasive alien plants in the Atlantis Aquifer. Report No ECHS092, CSIR Smart Places, Report prepared for The Nature Conservancy. September 2019.  
2. Stafford, L. et al (2018). The Greater Cape Town Water Fund. Assessing the return on investment for ecological infrastructure restoration. Business case. Report prepared for The Nature Conservancy. November 2018.

**Clearing invasive trees will yield more groundwater at a lower cost.**

Invest in nature-based solutions

## DON'T MOVE A MUSSEL

### Quagga Mussels Have Invaded Arizona

Before leaving any lake, please:

- **DRAIN** the water from the boat, livewell and the lower unit
- **CLEAN** the hull and remove all plant and animal material
- **DRY** the boat and **INSPECT** all exposed surfaces

After you visit a lake or other body of water, the Arizona Game and Fish Department asks you to take a few extra steps. A 30-day waiting period will aid in the detection and removal of hitchhikers on your boat, such as quagga larvae.

**NOW IT'S THE LAW**

# Early Detection, Rapid Response (EDRR)

---

**EDD** **MapS**  
Early Detection & Distribution Mapping System

**FLOWERS:**

- Appear above leaves in the middle of the plant
- Silvery-white to pink in colour
- Flowers year-round

**SEEDS:**

- Tiny wind-blown seeds fall from old flower stalks
- Flowers appear white when full of mature seeds

**GIANT GRASS:**

- Fountain-like growth up to 2m high
- Grows up to 4m, including flowering stalks

**LEAVES:**

- Long, narrow, V-shaped in cross-section
- Curving upward from the base, then curving downwards at the ends
- Greyish or bluish-green
- Margins sharp, cutting

**STEM:**

- Reed-like stem
- Brittle with age

NATIONAL ENVIRONMENTAL MANAGEMENT: BIODIVERSITY ACT 2004 (ACT NO. 10 OF 2004)

ALIEN AND INVASIVE SPECIES REGULATIONS, 2014

# Do the NEMBA regulations affect you?

- Invasive species are controlled by the National Environmental Management Biodiversity Act (NEMBA) (Act 10 of 2004) – Alien and Invasive Species (AIS) regulations, which were gazetted on 1 August 2014 and became law on 1 October 2014.
- SPECIES: 559 invaders in 4 categories
- The AIS Regulations list 4 different categories of invasive species that must be managed, controlled or eradicated from areas where they may cause harm to the environment, or that are prohibited to be brought into South Africa
- National List of Invasive Species which need to be controlled inside South Africa: Plants (**383**), mammals (41), birds (24), reptiles (35), amphibians (7), fresh-water fish (15), terrestrial invertebrates (23), fresh-water invertebrates (8), marine invertebrates (16) and
- microbial species (7). **Total: 559 species**

# Invasive Species Categories

## Category 1a Listed Invasive Species

- Take immediate steps to combat, or eradicate where possible.

## Category 1b Listed Invasive Species

- Control the listed invasive species.

## Category 2 Listed Invasive Species

- Utilization allowed under Permit conditions.
- Control outside of the Permit conditions.

## Category 3 Listed Invasive Species

- Subject to certain prohibitions (e.g. sell)
- Category 3 plant specimens in riparian areas are treated as Category 1b.

## Invasive Target Plants Reporting Tool

This page is for residents of the City of Cape Town to report sightings of 24 targeted invasive plants

### Report the location of 24 Invasive Target Plants

Become a Cape Town spotter. Take a good look at the City of Cape Town's targeted invasive plants.

There are 365 listed invasive plants. The City is asking residents, hikers and spotters to ONLY 'spot' 24 designated - invasive target plants.

Report their location, upload images and gather information for the Invasive Species Unit (ISU) - Early Detection and Rapid Response (EDRR) teams.

Start by registering as a user. Then fill in a Target Plant Reporting Form, every time you spot one of the 24 target invasive plants.
